

SOLUTION OVERVIEW

TruSOC™

Managed Security Services

powered by Terra Verde

Organizations of all sizes across the globe are being targeted and attacked by hackers and cyber-terrorists. It's time to change the game.

Multiple studies show that small and mid-sized organizations are easy targets for cyber attacks as they are less likely to have the programs, policies, technologies and resources to defend against such attacks. They also lack the ability to recover from financial theft or a massive data breach that may result in millions of dollars in fines.

To become more secure, organizations are deploying cyber security strategies, policies, training, technology and resources. Yet for many organizations, purchasing, building and maintaining these resources is often not financially feasible, and many companies discover that attempting to build these groups internally is unsustainable due to the ever changing attack techniques, changes in technology and difficulty of retaining skilled personnel.

Security Fast Facts

- Over 62% of breaches occurred in businesses with less than 1000 FTEs.
- Certified Security Professionals are in high demand.
- Security Engineers are difficult to retain.
- Compensation packages are growing in size due to a lack of qualified candidates.
- Research predicts a shortage of 2M Security professionals by 2017.

Introducing TruSOC™ powered by Terra Verde

cStor has partnered with the security experts at Terra Verde, who have invested millions of dollars and thousands of hours to build TruSOC™. This powerful managed security service platform includes complete, proven security controls and provides 24x7x365 security monitoring, reporting and remediation services for commercial and governmental organizations of all types and sizes across the United States.

TruSOC is simple and affordable way for organizations with limited security staff and budget to address compliance and threat management.

Every TruSOC service includes:

- Threat detection
- Vulnerability assessment
- Asset discovery
- Security operations
- Behavioral monitoring
- Security intelligence

Additional solutions include:

- Phishing simulation
- Vendor risk assessment management
- Breach detection & management
- Training

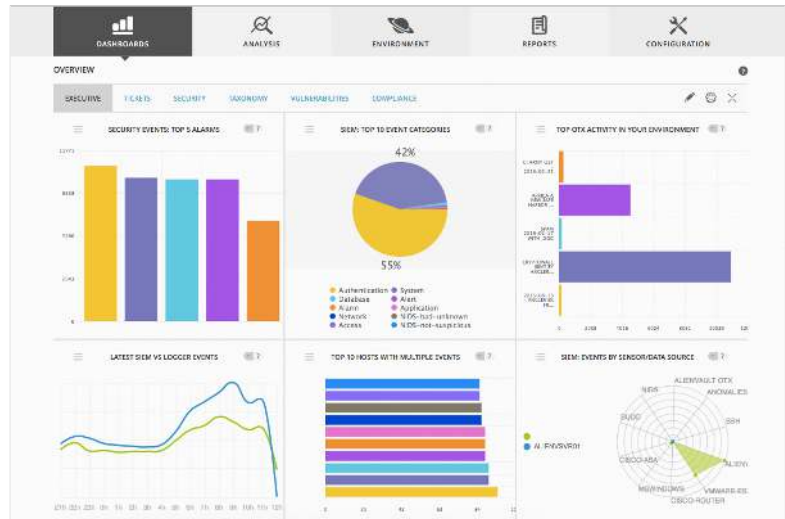

Making security sustainable

In today's world, the need for a sustainable security program that monitors, reports and helps address cyber-attacks and breaches is universal.

But with a growing shortage of security experts, the increase of attacks and threat techniques, and constantly changing technology solutions, how can organizations build a sustainable answer to the problem?

TruSOC Real-time security monitoring, alerts dashboard

Why cStor & TruSOC, powered by Terra Verde

TruSOC is a complete solution for addressing tactical and operational security concerns and is customized to fit your unique business or compliance requirements. The technology and service integrates within your existing infrastructure and is billed monthly for your convenience. TruSOC enables your organization to respond to today's complex threats.

The service provides an extensive set of capabilities to monitor, alert, track, and report on the state of security within your business operations and IT environment. The platform and service is not designed to replace existing preventative controls, but to implement detective controls and sustainable monitoring to addresses security and compliance requirements.

Why customers choose cStor & TruSOC

- Deploy a repeatable, scalable set of standards, practices and a “program” for security alert monitoring, management and remediation.
- Reduce overall security and compliance risk.
- Reduce and eliminate capital expenditures for security technology and personnel.
- Deploy a new, or optimize an existing Security Operations Center.
- Gain deeper visibility and understanding of cyber security vulnerabilities and risks.

Let's Get Started
