

5 steps to a digital workplace that's anywhere, anytime

1

## Deliver an exceptional experience for every employee.

Cisco® 802.11ac wireless and multigigabit switches help you deliver the wireless experience everyone needs to work efficiently on tablets, smartphones, and laptops.

### Just so you know

85% of organizations are using or plan to use gigabit WLAN to enable mobile collaboration, the Internet of Things (IoT), device growth, and media-rich apps, among others.<sup>2</sup>

2

## Enable secure access to resources.

Banish headaches over mobile devices, bring-your-own-device (BYOD) policy implementation, security, and management. Give employees reliable access to the critical information they need, on any device, from anywhere. And ensure that information stays secure.

*Cisco Unified Access™ (Cisco UA™) with Cisco Identity Services Engine (ISE) uses a centralized policy engine that simplifies and speeds up the onboarding of new workers and new devices. Cisco AnyConnect® Secure Mobility Solution secures users and mobile devices that are accessing resources from anywhere.*

3

## Keep your apps running at no-buffer speeds.

Many apps demand a lot of bandwidth—that means pressure on the WAN. Use Cisco Intelligent WAN (IWAN) to deliver an uncompromised experience with rich apps like collaboration and video and with more devices than ever.

4

## Provision applications quickly.

New, innovative applications help your employees increase efficiency in the office and on mobile devices. Cisco Data Center Networking solutions help you quickly provision the applications they need.

In 2015, 65% of companies will spend between 10% and 40% of their IT budget on mobility.<sup>3</sup>

### Quick notes

5

## Rethink the physical workplace.

Combine great design, people, and technology to create workplaces that boost collaboration and productivity. Cisco can help you create a workplace that works, while cutting real estate costs.
