

Nutanix Enterprise Cloud: The Ideal Platform for DevOps

DevOps is a combination of culture and technology that aims to close this gap. No matter where you are on the journey to integrated development and operations, the Nutanix Enterprise Cloud Platform will ensure that your infrastructure has the required agility and flexibility needed at all layers.

In today's high-speed world, software development teams are in charge of releasing new software code and features faster and faster, while operations and infrastructure teams are seeking stability and consistency in the same infrastructure. These often conflicting goals can lead to the rise of shadow IT, as development teams look to cloud providers for the agility they demand.

Nutanix Acropolis is the turnkey software foundation of the Nutanix Enterprise Cloud that delivers storage, compute, and virtualization services in a single fabric for all workloads. Acropolis is comprised of:

- **Distributed Storage Fabric**, forming the software core of the platform.
- **AHV**, included for at no extra cost with Nutanix purchasesolutions, is a next-generation hypervisor that accelerates deployment and simplifies management.
- **App Mobility Fabric** gives virtual machines the ability to move between hypervisors, for example from dev/test to production. Combining this with the storage-level snapshots and replication, developersnt can work on an independent copy of production data with no overhead in provisioning. Adding next-generation container technologies to the stack gives your virtual machines unprecedented mobility to VMs, allowing enabling applications to run where they are needed today, not where they were provisioned.
- **Container Services** provide native management for containers with persistent storage. This allows youenables developers to rapidly spin up and down instances, while not losing any data. Using this technology, development teams can iterate faster than ever and seamlessly move applications through the process—from development, to QA, to stage, and finally to production.

Nutanix Enterprise Cloud Benefits include:

- **Life-Cycle Management:** Nutanix continuously monitors data access patterns and places data in the correct tier, automatically moving data from high-performance flash to cost-effective hard drives or between nodes with no external configuration needed, providing maximum performance.
- **Linear Scalability:** Thanks to the web-scale engineering that is in our DNA, Nutanix clusters can start small and rapidly scale as needed, with linear performance gains. By combining the different Nutanix models, you can independently scale storage and compute to match your needs.
- **Solutions for All Storage Types:** Nutanix provides a portfolio of solutions for all types of workloads, from traditional virtualized and bare metal workloads, to next-generation containers.

REMOVING THE DELAY BETWEEN THOUGHT AND ACTION

Nutanix Prism is the operations and management hub of the Nutanix Enterprise Cloud Platform. Prism provides a variety of unique features for every environment, including:

One-Click Operations: Prism manages all infrastructure upgrades, including hypervisor, firmware, and storage software, with one-click simplicity. With Nutanix software-based technologies, new features can be added with a single click, and performance is improved with each release.

Automation and Systems Thinking: Prism provides a variety of options that give users and developers direct access to the infrastructure while maintaining control. With a built-in, self-service portal, users gain controlled access to resources and a true cloud experience. Every Prism operation is available through a comprehensive API, allowing complete automation of the stack.

Single Pane-of-Glass: Prism Central combines all disparate clusters into a single view, delivering a complete picture of your environment from one screen. Prism Central also adds powerful operational features, including capacity planning, what-if analyses, and global resource monitoring, giving infrastructure teams the information they need to make important decisions.

Nutanix makes infrastructure invisible, elevating IT to focus on the applications and services that power their business. The Nutanix enterprise cloud platform leverages web-scale engineering and consumer-grade design to natively converge compute, virtualization and storage into a resilient, software-defined solution with rich machine intelligence. The result is predictable performance, cloud-like infrastructure consumption, robust security, and seamless application mobility for a broad range of enterprise applications.
